The screenshot displays the Murf AI web interface. At the top, a project titled 'My Awesome Project' is shown as 'Saved'. A sidebar on the left contains navigation options: 'Explore AI Voices', 'Import Script', 'Add Media', 'Voice Changer', and 'Translate'. The main workspace features a text input area with a dropdown for 'Natalie (F)', a 'Promo' button, and sliders for 'Pitch' and 'Speed', both set to 0%. Below the input area is a 'Try Our Favorite Voices' section with five voice options: Terrell (M), Clint (M), Alicia (F), Charles (M), and Ava (F), all labeled as 'English - US & Canada'. Each option has a 'Select' button. A 'Hear More Voices' button is located below this section. The bottom of the interface includes a timeline and a preview window.

Prompt 1:

I copy this text from google gemini and generate the voice here

Observations:

It generates real voices from text we input. I think it is a great tool to create presentations and videos. It is easy to use and provides millions of stock music, images, and video assets that you can use to create videos for the web, social media, marketing and more.

Also has the option to clone your voice (payment plan)

Benefits:

- Free access
- Many alternative voices: Murf AI provides over 120 voices available in 20 languages.
- Media assets: Murf AI offers millions of media assets (videos, photos, pictures). You can also upload your videos and other media assets for on-brand results.
- Customization: The voice editor allows you to change the pitch, tone, and speaking style.
- Ease of use.
